

HECKLER & KOCH

HK169

HK169

GRENAD LAUNCHER

HK169 FEATURES

There are multiple ambidextrous sling attachment points located on the HK169; the rear end center of the stock, rear end upper left and right side of receiver, front muzzle upper area left and right on the receiver.

Ambidextrous safety lever

Mechanical ladder sight folds down and can easily be removed and replaced with optional accessory sights.

Picatinny rail for mounting accessories

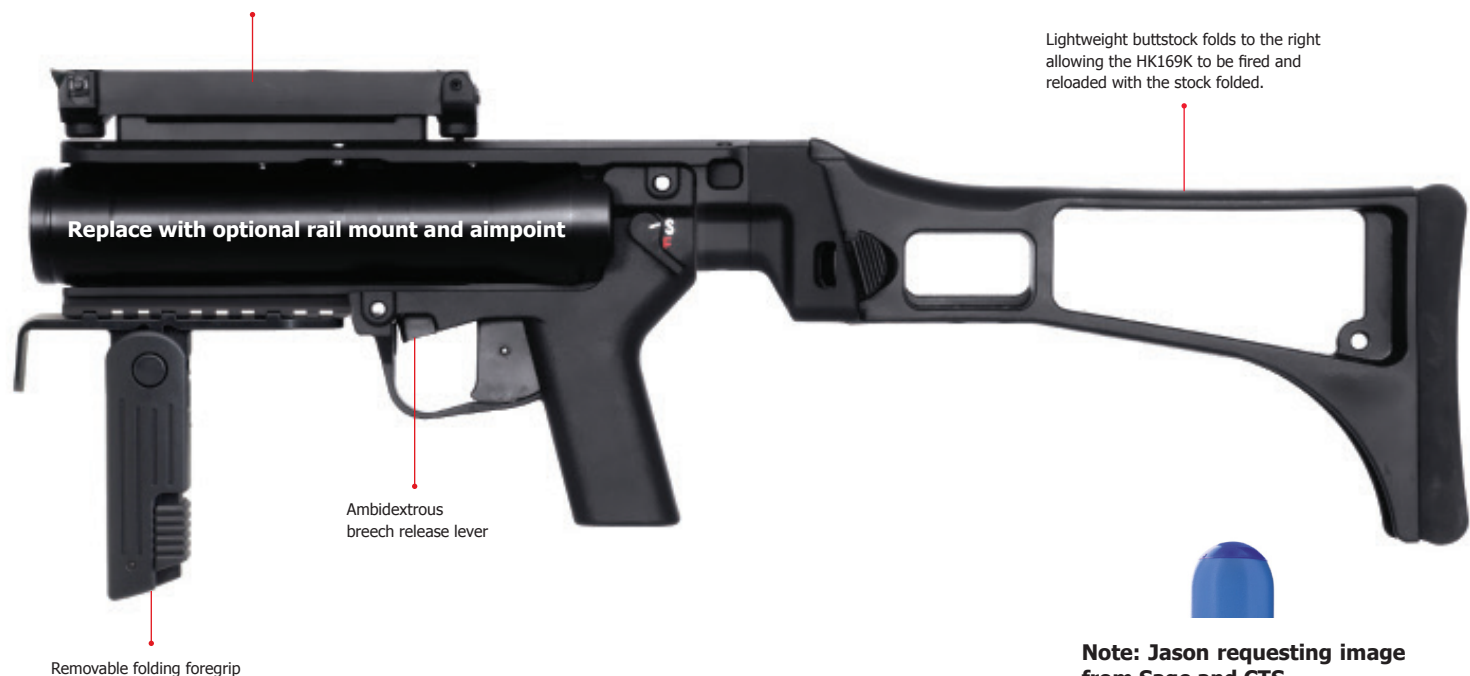

Responding to the needs of Law Enforcement for a special application product providing versatile tactical employment, Heckler and Koch presents the HK169. This multi-purpose variant of the grenade launcher in service with the US military and many other NATO allies, the HK169 is lightweight (less than four pounds), break action launcher, representing hard-use durability, and capable of firing a wide range of 40mm low velocity ammunition types, including CS, HE, and less than lethal.

Safety and reliability is built in. Multiple safety features include an Internal drop safety which prevents the weapon from firing by blocking the hammer until the trigger is pulled and a barrel locking lever which prevents out of battery fire until the barrel is fully locked into the breach. The double action trigger provides reliable ignition, and in the case of a defective primer, the HK169 features a "second strike" capability, by simply pulling the trigger again, without the need to re-cock or open the breach again, a feature not found in competing designs.

Simplicity in operation and accuracy are hallmarks. Controls are fully ambidextrous, deployment is rapid and sighting is intuitive. Whether utilizing the standard ladder sights or attaching an optic, the HK169, with its rifled, steel barrel is capable of providing area fire as well as point target fire with an incredibly high degree of accuracy.

Sight Options:
Standard 350M In-line Folding Ladder Sights (6.5 inch) preferred for High Explosive munitions. Sighting increments graduated every at 30M and every 50M.
(In-line) Long Picatinny Rail (10.5 inch) for user optic and back up iron sights preferred for less lethal munitions.
(In-line) Short Picatinny Rail (4.5 inch) for user optic only.

Lightweight buttstock folds to the right allowing the HK169K to be fired and reloaded with the stock folded.
