HK417 A2

HK417 A2

RIFLE / 7.62 mm x 51

HK417 FEATURES

Developed from the success of the HK416, the HK417 represents a 7.62 x 51mm caliber rifle that bridges the gap between a traditional patrol rifle and bolt action sniper rifle. An uncompromising design, the HK417 provides a level of hard use performance and unmatched reliability to satisfy top tier requirements.

With its short stroke gas piston operating system, hot carbon fouling is not directed back into the action, allowing the weapon to run longer, with less maintenance and with less wear on internal components. Utilizing the adjustable gas regulator, the operator can tune the action specifically for suppressed or unsuppressed employment. While fully ambidextrous controls, light weight and slim profile make the HK417 easy to operate, manipulate and employ.

For those who demand .30 caliber capability, AR familiarity and uncompromising reliability and durability, the HK417 outperforms.

HK417 A2 RIFLE

TECHNICAL DATA

Models	HK417 13"	HK417 16.5"	HK417 20"
Caliber	7.62 mm x 51		
Operating principle	Gas operated
